Press the [#] button Two beeps will be heard indicating that the code change was valid

The code is now changed and the system is ready to use

Example   9398 1# 2# 5756 #

Changing the alarm master and user codes can be performed easily in most cases. Please refer above or if you still have a copy of your user manual for instructions on how to change codes. If you have lost your master code this must be done by a licensed technician as you will need to factory default your alarm system. You may not be able to do this procedure without an installers pin code. Please never give your code to anyone. If you think someone may have your user pin code, please change this immediately.
